BUILDING CUSTOM GPT & AI AGENTS

TASK 3

Build an App Using OpenAI API Key with Agentive

In this task, you will come up with an app to generate emails on any topic you want in your own style and host it on Agentive.

FOLLOW THE STEPS TO PERFORM THE ACTIVITY:

Step 1 :Ask ChatGPT to come up with an extensive prompt for your customgpt which will come up with super extensive emails in your own style. Attach 4-5 emails of yours to mimic your style.

Example Prompt :You are an expert at writing extensive prompts for CustomGPT. Please come up with a detailed prompt which can write emails on any topics i want in my own style. It knows how to write emails in a way that are considering gold standard. Here are some of my emails, use the below to mimic my style :

Email1 : < Paste an email you sent from your outbox >

Email 2 :< Paste an email you sent from your outbox >

Email 3:< Paste an email you sent from your outbox >

Email 4 :< Paste an email you sent from your outbox >

Prompt to build the basic prompt

Come up with an extensive prompt which i can attach 10 of my LinkedIn posts with for chatgpt to be able to give an output prompt which i can use going forward to make chatgpt write exactly like me. I will be sharing the posts that have gone viral, so understand why these posts have gone viral, how hooks are designed, how the whole post is written including spacing , using of emojis, action words etc. Idea is when i use the prompt that chatgpt will give me as an output and i give a topic with it, it should spit out content exactly like me with a structure in away that it will go viral

Step 2:Now ask it to rewrite the prompt in the markdown formatting and give the output in a code editor so that formatting is not broken.

Example Prompt :Please rewrite the above prompt in the markdown formatting and give me the output in a code editor.Here is an example of markdown formatting

**Markdown Prompt Template:**

Role:

Objective:

Context:

Instructions:

- Instruction 1 :

- Instruction 2 :

- Instruction 3 :

Notes:

- Note 1

- Note 2

- Note 3

Step 3 :Signup a free account on <u>Agentive</u>, create the app using the OpenAI key provided by GS and use the prompt created on ChatGPT and make the app live.

API KEY will be provided.

Step 3 : Click on Create Agent
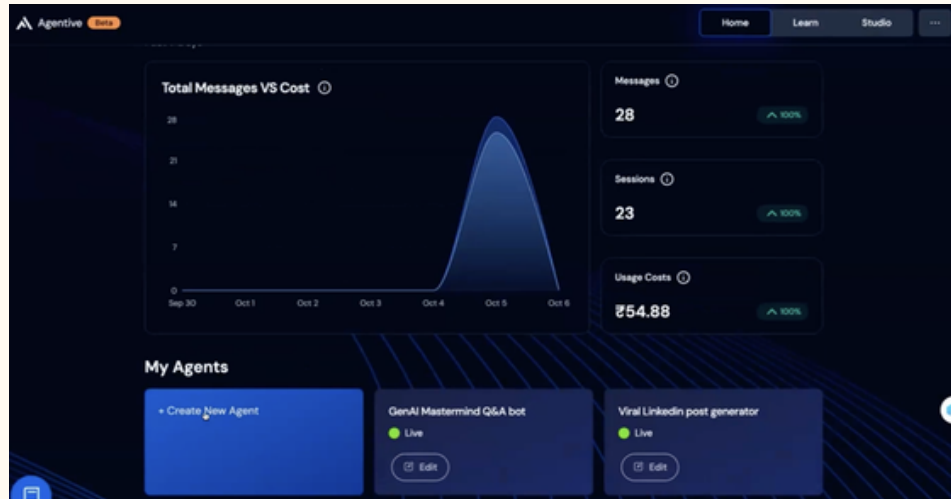

Step 3 : Create New Agent -> 3rd Field - > Select OpenAI Key
